

Validation of Sargon Nonlinear solver (CURAN, version 9.60)		
TEST TR007	VALIDATION, RELIABILITY, BENCHMARK	Marco Croci Rev.2-03/12/2010

Test description	
Constitutive law of trusses material: rigid-perfectly plastic if σ_y is reached, structure collapses.	
Test model: curanTR_007.WSR	

Cross-section: circular section, diameter=40mm (area: A=1256,64mm ²)													
<table border="1"> <thead> <tr> <th colspan="2">Geometry</th> </tr> </thead> <tbody> <tr> <td>900mm</td><td>2000mm</td></tr> </tbody> </table>	Geometry		900mm	2000mm	<table border="1"> <thead> <tr> <th colspan="2">Force (z direction)</th> </tr> </thead> <tbody> <tr> <td>Load case 1</td><td>$F_1 = -240000\text{N}$</td></tr> <tr> <td>Load case 2</td><td>$F_2 = -300000\text{N}$</td></tr> <tr> <td colspan="2">Load path: not active</td></tr> </tbody> </table>	Force (z direction)		Load case 1	$F_1 = -240000\text{N}$	Load case 2	$F_2 = -300000\text{N}$	Load path: not active	
Geometry													
900mm	2000mm												
Force (z direction)													
Load case 1	$F_1 = -240000\text{N}$												
Load case 2	$F_2 = -300000\text{N}$												
Load path: not active													

CHECK	
In load case 1, axial force should be $2,924\text{e}5\text{N}$, as in a linear elastic case (see tests 004-006) and displacements should be null.	
In load case 2, σ_y is exceeded: normal stress should be equal to σ_y and solution should stop at a load level causing σ_y . This load level is equal to the ratio between the force causing exactly σ_y (F_{σ_y}) and currently applied force (F_2).	
Normal stress in load case 1 is $\sigma_1=2,924\text{e}5\text{N}/A=2,2924\text{e}5\text{N}/1256,64\text{mm}^2=232,7\text{N/mm}^2$ $F_{\sigma_y}=F_1 * \sigma_y / \sigma_1 = -240000\text{N} * 235\text{Nmm}^2 / 232,7\text{Nmm}^2 = 242372,15\text{N}$. Load level= $ F_{\sigma_y}/F_2 = 0,8079$	

Load case	Value	Unit	CURAN	THEORETICAL	% diff.
1	Truss #1 axial force	N	-2,924E+05	-2,924E+05	0,00
1	Node #8 displacement (z)	mm	-1,244E-06	0,000E+00	~0,00
2	Failure load level	/	8,067E-01	8,079E-01	-0,15
2	Truss #1 normal stress	N	-2,347E+02	-2,350E+02	-0,13

% difference = (CURAN - THEORETICAL) / THEORETICAL * 100

Precision of limit multiplier for the analysis: 0.001
